Test	Flag	Result	Reference Range - Units	Lab Lic. #
<u>Tumour Markers</u>				
Prostate Specific Antigen		0.66	<4.0 ug/L	
<p>Methodology: Abbott Architect immunoassay. Results should not be interpreted in isolation as absolute evidence of the presence or absence of malignant disease. Changes in serial results may be misleading unless all Total PSA results are from the same laboratory method.</p>				
<u>Reproductive and Gonadal</u>				
Estradiol		70	<162 pmol/L	
<p>NOTE: Fulvestrant has been shown to interfere with estradiol testing by this direct immunoassay. Results for patients taking this medication may be falsely elevated to a clinically-significant degree.</p> <p>Some steroidal aromatase inhibitors are structurally related to estradiol and may interfere with some direct immunoassays.</p>				
Dehydroepiandrosterone [DHEA-S]		4.5	< 15.0 umol/L	
Testosterone		24.1	8.4 - 28.8 nmol/L	
<p>Total Testosterone levels may not reflect the biologically-active testosterone when SHBG levels are abnormal.</p>				
<u>Serum Proteins</u>				
C Reactive Protein (High Sensitivity)		0.37	mg/L	
<p>The American heart association and US Centres for Disease Control and Prevention have defined risk groups as follows: Low Risk: <1.0 mg/L Moderate Risk: 1.0 - 3.0 mg/L High Risk: >3.0 hs-CRP values > or 5.00 mg/L may be due to inflammation.</p>				
<u>Bone Markers</u>				
25-Hydroxyvitamin D		98	75 - 250 nmol/L	
<p>Season, race and dietary intake affect 25-Hydroxy Vitamin D levels. Highest levels are found in the summer months and lowest levels during the winter.</p>
